

## AMENDMENTS TO THE SPECIFICATION

Please amend the Abstract as follows:

A method of setting up a call between first and second nodes of a communication system, said call extending across at least one circuit switched access network and a packet switched backbone network, the networks being interconnected by at least one Media Gateway. The method comprises, at a control node, obtaining ~~from~~ from a Home Subscriber Server the identity of a Media Gateway Control Function controlling that Media Gateway which will terminate the call within the circuit switched access network. The first node calls an access number notified to it by the Media Gateway Control Function, and as part of the call setup procedure the identity of the Media Gateway selected to terminate the call is communicated to the Media Gateway Control Function.
